

Policy #: 300-005

Date of issue: 01/10/2025

Versión: 1.0

Effective date: 01/10/2025

Approved by: Information Security Committee (ICS)

GenAI usage Policy

1. Objective

The purpose of Altadia Group's Generative AI (GenAI) policy is to ensure legal and ethical use of GenAI technology. GenAI refers to an artificial intelligence technology that synthesizes new versions of text, audio or visual imagery from large bodies of data. If you have any questions about what constitutes GenAI, please contact the IT department at it@altadiagroup.com. The guidance below defines acceptable use of GenAI.

2. Scope

This policy applies to employees, contractors, directors and/or third parties with access to critical or high-risk systems or customer or employee PI (Personal Information) regarding the use of GenAI, including internal self-developed models, third party models that the organization deploys, or publicly available applications such as ChatGPT or Gemini. This policy applies to the use of those applications on company devices and/or personal devices when used for work purposes.

3. Guidelines for Using Generative AI Tools

3.1. Acceptable use of technology

To maintain the security of our data and IT systems, **employees must adhere** to our Acceptable Systems and Resources Usage Policy 300-004 and **use only approved tools**, including approved GenAI tools, in the organization that have been vetted through the IT Technology onboarding process (Approved Tools). Refer to Appendix I for a list of Approved Tools.

Please follow our software approval process if you would like to add a new tool with generative AI capabilities to the approved list (Please refer to the 300-006: Software acquisition Policy).

Do not install any non-approved Application Programming Interfaces (APIs), web or browser plug-ins, connectors (e.g., AdBlock, Grammarly, or Adobe Flash), or software related to GenAI systems. Any AI-generated code in approved systems must be reviewed via established review practices.

Access and usage of Generative AI tools must be conducted exclusively through corporate, licensed accounts. The use of personal accounts for corporate business purposes is strictly prohibited.

Adhere to the following guidelines if using public or open-source tools:

- Use of GenAI on company devices **must be limited to business purposes**.
- Use of GenAI tools on personal devices or personal accounts to conduct company business is prohibited.
- Use of GenAI tools on personal devices to circumvent company policies or safeguards is strictly prohibited.
- Use of code generated by these GenAI systems anywhere in the company's technology environment is prohibited.
- Use of free GenAI models which use the information for training the model is prohibited.

3.2. Data Protection and Privacy

To maintain the confidentiality of our company's sensitive information, including but not limited to employee and customer personal information, our intellectual property, and copyrighted material, impacted parties may not input sensitive information into any GenAI system unless that GenAI system has been approved by IT department and is within the organization's security perimeter.

Adhere to the following guidelines if using public, open-source tools:

To maintain confidentiality of sensitive company information:

- **Do not** input intellectual property into non-approved generative AI applications.
- **Do not** enter personal information (PI) of employees, customers, or other third parties into any non-approved GenAI application. Treat the application as you would an employee of another company with whom we have no formal relationship.
- **Do** contact IT department, or email it@altadiagroup.com if you are unsure whether information you are planning to input falls into any of the above categories.

Employees **must follow the next guidelines** when using approved generative AI tools, including those corporate as Google Gemini:

- Users **must never** input or upload information classified as **Confidential** or **Critical/Restricted** into any Generative AI tool, regardless of the licensing tier. This includes trade secrets, unreleased financial data, proprietary algorithms, and critical client PII. Exceptions to this rule will only be considered if a Data Processing Agreement (DPA) is executed with the provider. This agreement must explicitly ensure that the data will not be utilized under any circumstances for the purpose of model training and that it will be immediately expunged following processing.

- Data containing Personally Identifiable Information (PII) or sensitive employee records shall not be processed by Generative AI systems unless the data has been fully and demonstrably anonymized beforehand.
- Use of approved Generative AI tools is strictly limited to data classified as Public or Internal (e.g., drafts, general summaries, public domain knowledge, internal shared information) only.
- Employees are responsible for reviewing all prompts and uploaded files to ensure no sensitive internal codes, customer data, or proprietary information are inadvertently included in the submission.

3.3. Data Protection and Privacy

To protect our stakeholders (e.g., employees, customers, and other parties with whom we do business) and to protect the company from reputational damage, employees must review for accuracy of the output to avoid false outputs (hallucinations), bias, and copyright infringement.

Any content or derivative output generated using Altadia's inputs or processed on Altadia's behalf is considered Altadia Group Intellectual Property. This output shall be handled according to its derived classification and must not be used in a manner that compromises Altadia's ownership.

All factual, technical, or legal information generated by the AI tool must be independently verified against Altadia's authoritative sources before being used for decision-making or external communication. Users must acknowledge the risk of 'hallucination' (inaccurate results).

3.4. Transparency

Consistent with our code of conduct and other policy, we aim to provide our employees, third parties and customers with transparency regarding how we use GenAI to support our work. To that end, when GenAI forms the substantial basis for final materials without significant human alteration OR where otherwise required by applicable law, employees (etc.) must identify in that final material that GenAI has been used.

3.5. Third-Party Risk

Data sent by Altadia Group to third parties may be used in the third party's GenAI tools. As such, all new third-party applications/software and uses of GenAI must be approved via our regular technology review process prior to such use.

3.6. Compliance with Laws and Policies

All impacted parties must also comply with applicable laws, regulations or company policies regarding the use or development of GenAI content or tools.

3.7. Reporting of Policy Violations

All impacted parties are expected to report suspected inadvertent or intentional policy violations at it@altadiagroup.com or using our corporate whistleblower channel (Convercent). This will help ensure that any potential breaches of confidentiality or other concerns are addressed swiftly and effectively, maintaining the trust and security of our data and systems. Employees who report misconduct or concerns in good faith will not be retaliated against.

4. Monitoring

Altadia Group will access and monitor the use of GenAI applications on any company-issued devices or to ensure compliant use of these systems.

5. Failure to comply

Impacted parties who fail to comply with any provision of this Policy may be subject to discipline up to and including termination of employment. Violations by contractors may be considered breach of contract and result in removal from assignment. Any GenAI-related activities which appear to violate applicable laws will be subject to company discipline procedures and, where applicable and necessary, may be reported to external impacted parties or to law enforcement. If monitoring systems and processes detect a possible policy violation, or if an Impacted Party User reports a suspected policy violation, please report to it@altadiagroup.com.

7. Appendix I. Approved Tools and Acceptable Use Statement

Any use of GenAI, via platforms, tools and software must be consistent with our code of conduct, company policy and applicable law. Use of GenAI on company devices must be limited to business purposes. Use of GenAI tools on personal devices or via personal accounts to conduct company business is prohibited. Use of GenAI tools on personal devices to circumvent company policies or safeguards **is strictly prohibited**.

Any violation of this policy or use cases out of scope of the table below, will result in disciplinary action, up to and including termination.

This table is not inclusive of all possible use cases. If a use case is not specifically listed, a user should ask before proceeding. We reserve the right to make changes to, or update this table periodically:

The following uses are approved:

Accepted use	All other use
Translating text from a secondary, publicly available source	All other uses require preauthorized approval. To request approval, please email it@altadiagroup.com
Conducting high-level background research into a nonsensitive topic	
Brainstorming ideas for icebreakers at an off-site	
Generating graphic content (images, videos) intended solely for product promotion.	
Creating outlines or visual aids for use in internal presentations	

The following applications are approved:

Application	Notes
Gemini	All employees with corporate email have a valid corporate license assigned.
ChatGPT	Only permitted when using a payment plan. Licenses will be bought and assigned ONLY by the IT department.
Freepik	Only permitted when using a payment plan. Exclusive use for Design & Marketing departments.
